1. INTRODUCTION

1.1 Project Overview

Students are often worried about their chances of admission to University. The aim of this project is to help students in shortlisting universities with their profiles. The predicted output gives them a fair idea about their admission chances in a particular university. This analysis should also help students who are currently preparing or will be preparing to get a better idea.

1.2 Purpose

A persons education plays a vital role in their life. While planning for education students often have several questions regarding the courses, universities, job opportunities, expenses involved, etc. Securing admission in their dream university is one of their main concerns. It is seen that often students prefer to pursue their education from universities which have global recognition.

2. LITERATURE SURVEY

When it comes to international students the first choice of the majority of them is the United States of America. With the majority of worlds highly reputed universities, wide range of courses offered in every sector, highly accredited education system and teaching, scholarships provided to students, best job market and many more advantages make it the dream destination for the international 1 students. According to research, there are above 8 Million international students studying in more than 1700 public and 2500 private universities and colleges across the USA. (MasterPortal (2017))

2.1 Existing problem

Previous research done in this area used Naive Bayes algorithm which will evaluate the success probability of student application into a respective university but the main drawback is they didn't consider all the factors which will contribute in the student admission process like TOEFL/IELTS, SOP, LOR and under graduate score. Bayesian Networks Algorithm have been used to create a decision support network for evaluating the application submitted by foreign students of the university. This model was developed to forecast the progress of prospective students by comparing the score of students currently studying at university. The model thus predicted whether the aspiring student should be admitted to university on the basis of various scores of students. Since the comparisons are made only with students who got admission into the universities but not with students who got their admission rejected so this method will not be that much accurate.

2.3 Problem Statement Definition

Build an application that predicts the university admission chances of a student powered by machine learning models. Train the model and host it on IBM cloud. The majority of international students studying in the USA are from India and China. In the past decade, India has seen a huge increase in the number of students opting to pursue their education from foreign universities in countries like The USA, Ireland, Australia, Germany, etc. Although there are significant universities and colleges in India, students are finding it difficult to get admission in the highly ranked colleges and also getting a job is a challenge as the ratio of number students to the number work opportunities available is quite high. India is one of the leading counties in the number of software engineers produced each year; it becomes tough for the students to find jobs in elite companies due to high competition. This motivates a good number of students to pursue post-graduation in their field. It is seen that the number of students pursuing Masters in Computer Science field from universities in the USA is quite high; the focus of this research will be on these students.

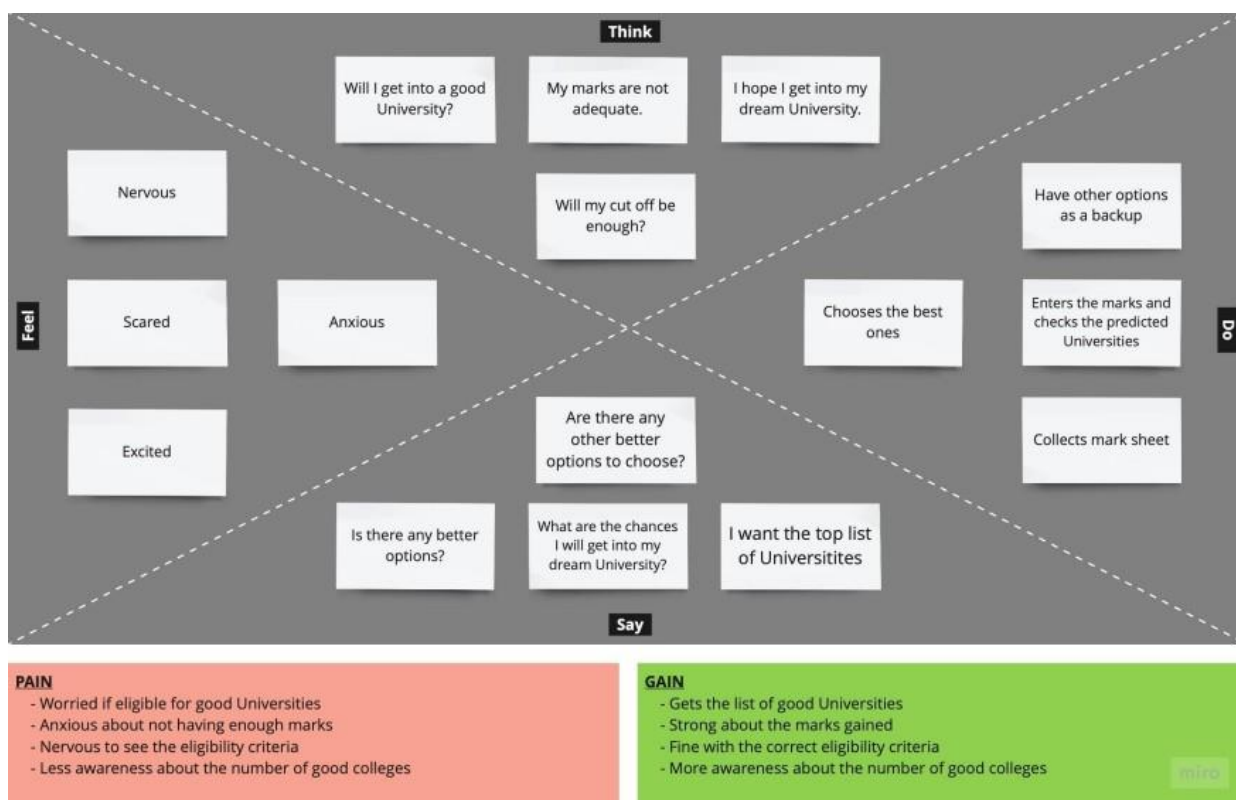

3. IDEATION & PROPOSED SOLUTION

The project aims to develop an application that uses artificial intelligence with the help of chat bot to customize products for the customers which enhances the fame of ecommerce store and reduce the time which customers spends on choosing products. The application also uses IBM cloud storage for storing objects.

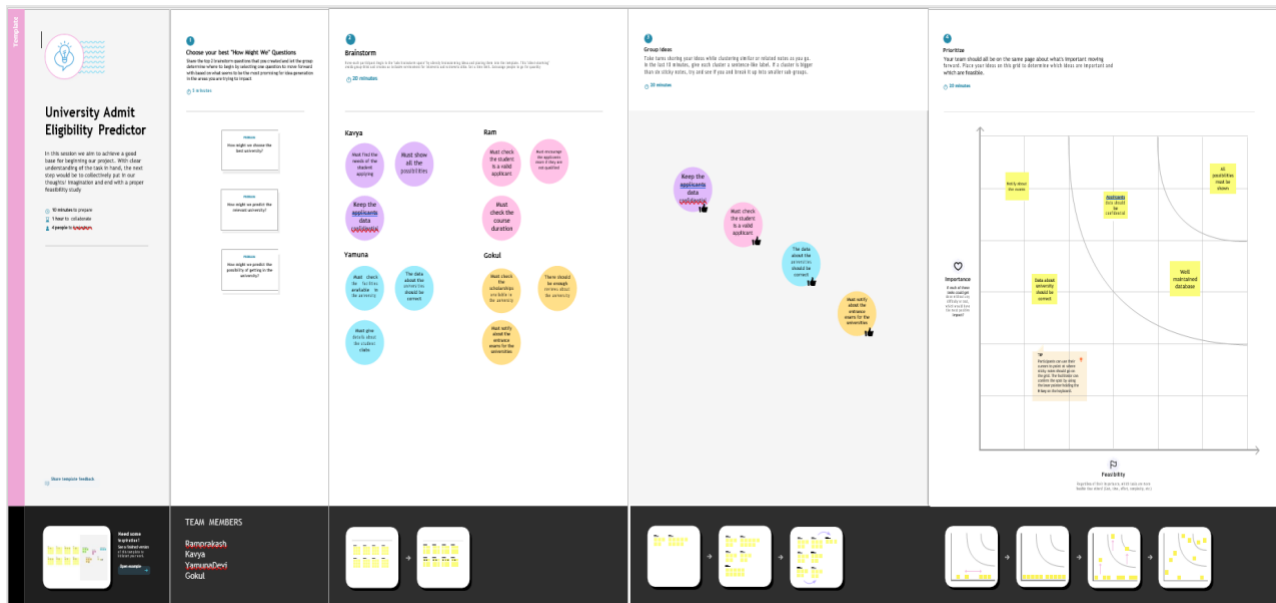

An application that predicts the university admission chances of a student powered by machine learning models. Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. The primary objective of this research is to develop a system to solve the problems the international students are facing while applying for universities in the USA.

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

This task of shortlisting the universities where the student has high chances of admission is difficult for mainly for the international students, so they end up with applying to many universities in hopes of getting admission in few of them thus investing an extra amount of money in the applications. There are several portals and websites which provide information and help to students in shortlisting the universities, but they are not reliable. Most of the students dont take the risk of evaluating the colleges by themselves, and they seek the help of the education consultancy firms to do it for them. Again for this students have to pay a huge amount of fee to the education consultant.

3.3 Proposed Solution

These problems can be resolved by using regression algorithms / classification algorithms as they can consider most of the features for prediction. Linear regression / KNN classification / Random forest Regressor can be used as the machine learning model for the model. XG boost model can also be used which performs better on small to medium scale datasets but the model giving accurate and desired results only will be selected. The aim of the proposed system is to address the limitations of the current system. The requirements for the system have been gathered from the defects recorded in the past and also based on the feedback from users of previous metrics tools.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	<ul style="list-style-type: none"> ➤ The User is a Student he needs a way to computerization of Entrance seat allotment and this machine learning model helps to filter the Eligible students to enter a university admission using CS program.
2.	Idea / Solution description	<ul style="list-style-type: none"> ➤ Linear Regression Model it is an algorithm based on the supervised learning of computers, it does the role of regression model predictive goal value. ➤ And also Ridge regression , Random Forest Methods are used to the parameter estimates in the hope of reducing uncertainty, increasing the accuracy score above 80% ➤ A GUI was developed to make the program, from a non-technical perspective, usable and user Friendly.
3.	Novelty / Uniqueness	<ul style="list-style-type: none"> ➤ The main goal of the system is to automate the process carried out in the organization with improved performance and realize the vision of paperless admission. ➤ The system shall allow the user's details to be stored for the next time they return to the website. If the user chooses to take a new evaluation, the most recent inputs as well as prediction shall replace any previous data.
4.	Social Impact / Customer Satisfaction	<p>The Social impacts of the system are listed below:</p> <ul style="list-style-type: none"> ➤ Manage large number of student details. ➤ Manage all details of student who registered for the course ➤ Create student accounts and maintain the data effectively. ➤ View all the details of the students. ➤ Reduce the work load in interview the students for selection. ➤ Activities like updating, modification, deletion of records should be easier. ➤ Easy Accessible and User friendly.
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> ➤ In the Business point of view paperless work and man power saving, fully upgradable computerization process, easy admission and profitable approach to right candidate for selects right universities/college.

3.4 Problem Solution fit

We will be developing a University Admit Eligibility Predictor system which will help the students to predict the chances of their application being selected for a particular university for which they wish to apply based on their profile. Also, the system will provide a recommendation of universities to the student to which the student has a high possibility of getting admission. Multiple machine learning classification algorithms were evaluated to develop the system.

Project Title: University Admit Eligibility Predictor

Project Design Phase-I - Solution Fit Template

Team ID: PNT2022TMD08827

<p>1. CUSTOMER SEGMENT(S) CS</p> <p>Users:</p> <p>Students- The people who will benefit the most from using this system are Indian students. Especially students looking to pursue their higher education from foreign universities, particularly in the United States.</p> <p>Administrators- The administrator shall be able to access all the data stored in the application.</p> <p>Define CS, fit into CC</p>	<p>6. CUSTOMER CONSTRAINTS CS</p> <p>The primary constraints of the system are:</p> <ul style="list-style-type: none"> • Provide customers access to the prediction model • Provide answers to most common FAQs regarding PG Admissions abroad • Provide administrator access to all records • Provide analysis of how the various academic factors affect university admission 	<p>5. AVAILABLE SOLUTIONS AS</p> <ul style="list-style-type: none"> • Linear Regression Model it is an algorithm based on the supervised learning of computers, it does the role of regression model predictive goal value. • And also Ridge regression, RandomForest Methods are used to the parameter estimates in the hope of reducing uncertainty, increasing the accuracy score above 80%
<p>2. JOBS-TO-BE-DONE / PROBLEMS J&P</p> <ul style="list-style-type: none"> • The students who are the beneficiary of this online admission process, face vivid problems in making an online transitions and filtering process. • Among these problems the most common and frequently occurring problems for both rural and urban students are website are not working, connectivity, online payments, system requirements, cost of transactions and lack of customers care etc. <p>Focus on J&P, fit into RC, understand RC</p>	<p>9. PROBLEM ROOT CAUSE RC</p> <ul style="list-style-type: none"> ➤ The management of the online admission processes must focus to provide continuous follow-up, updation and the customer care to the students and customers. 	<p>7. BEHAVIOUR BE</p> <p>The Behaviors of the system is,</p> <ul style="list-style-type: none"> ➤ The entire process is very dynamic and no training is required to use the websites. ➤ Make it easier for fraudsters to manipulate the application process and eligibility requirements. <p>Focus on J&P, fit into RC, understand RC</p>
<p>3. TRIGGERS TR</p> <ul style="list-style-type: none"> ➤ May produce the inaccurate results if the data if the data is not feed properly. <ul style="list-style-type: none"> ➤ It requires active internet connection. <p>4. EMOTIONS: BEFORE / AFTER EM</p> <p>Before: There are lot of questions arises in the users mind about the web application like How to handle the system? If it is predict the eligibility of the admission process?</p> <p>After: Attractive and organized system, user friendly interface, precise and reliable and finally fair admission process.</p>	<p>10. YOUR SOLUTION SL</p> <p>The system shall provide the user access to the AI predictor, wherein the user will be able to fill in a form with their academic transcripts data (GRE score, TOEFL Score, CGPA, SOP Score, LOR Score, Research experience), choose the tier of university they wish to apply to (1-5 (top level)) and then get a prediction of their chances of admissions to that level university based on the mapping between their requirements and the student's results</p>	<p>8. CHANNELS of BEHAVIOUR CH</p> <p>8.1 ONLINE</p> <p>The candidate data is to be entered only once, No longer require to collect forms of all the candidates and file them, Paperless process, Man power saving and applicable for rural and urban students.</p> <p>8.2 OFFLINE</p> <p>The candidate's thoughts about the offline system are rigid learning schedules and inconvenience, High chances of distraction and inconvenient doubt resolution.</p>

4. REQUIREMENT ANALYSIS

Requirements analysis, also called requirements engineering, is the process of determining user expectations for a new or modified product. These features, called requirements, must be quantifiable, relevant and detailed. In software engineering, such requirements are often called functional specifications. Requirements analysis is critical to the success or failure of a systems or software project. The requirements should be documented, actionable, measurable, testable, traceable, related to identified business needs or opportunities, and defined to a level of detail sufficient for system design.

4.1 Functional requirement

- User Registration
- User Confirmation
- User Login
- Search
- User
- Analysis
- Prediction

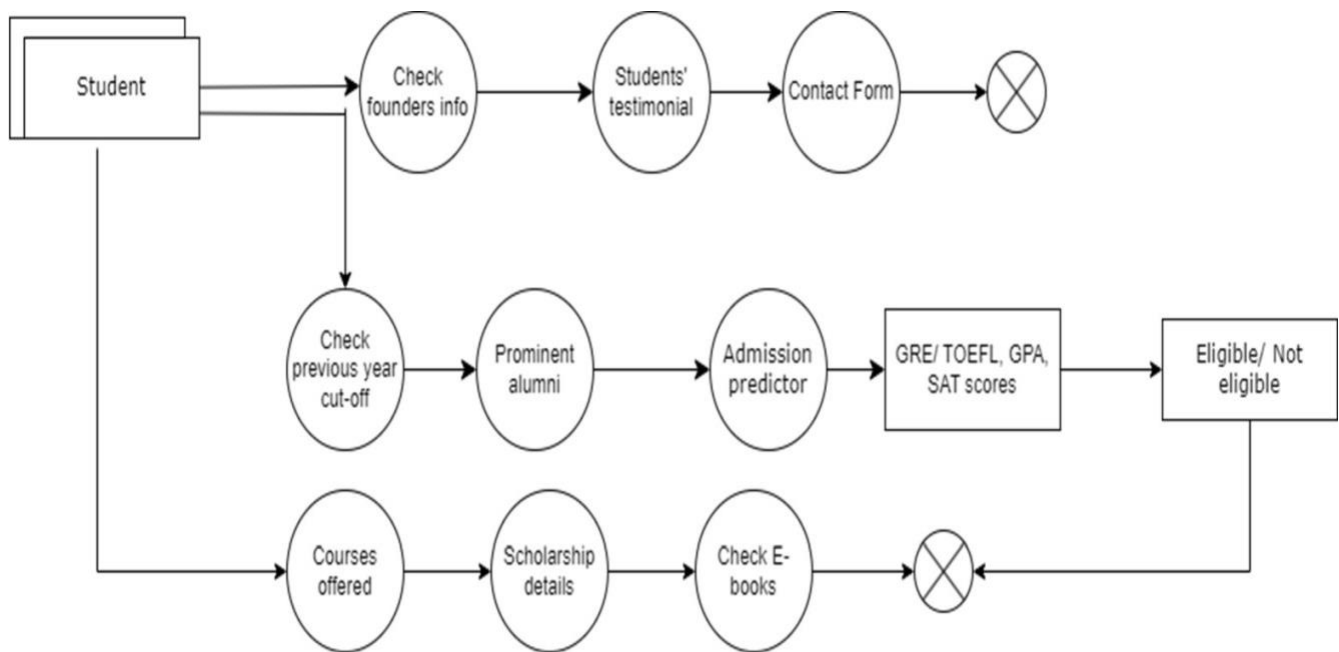

4.2 Non-Functional requirements

- Performance
- Security
- Portability
- Availability
- Compatibility
- Scalability
- Capacity
- Reliability
- Environment
- Localization

5. PROJECT DESIGN

5.1 Data Flow Diagrams

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

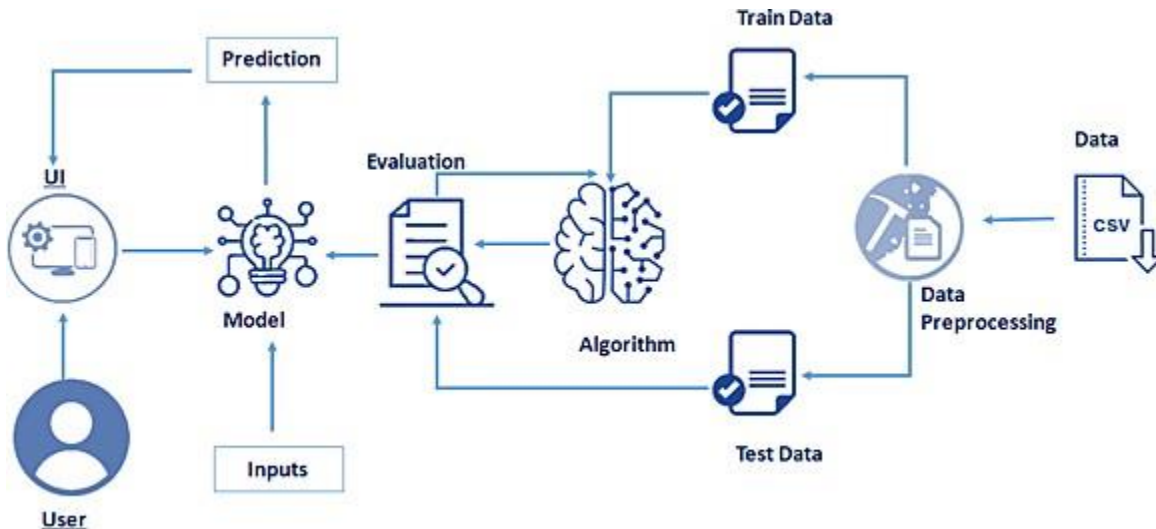

5.2 Solution & Technical Architecture

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.

Provide specifications according to which the solution is defined, managed, and delivered.

5.3 User Stories

A user story is an informal, natural language description of features of a software system. They are written from the perspective of an end user or user of a system, and may be recorded on index cards, post-it notes, or digitally in project management software. Depending on the project, user stories may be written by different stakeholders like client, user, manager, or development team.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer	Landing page	USN-1	As a user, I can view the details about the university	I can access the university landing page	Medium	Sprint-1
		USN-2	As a user, I can view the latest news about the university	I can access the latest news	Medium	Sprint-1
		USN-3	As a user, I can fill the contact form for queries	I can fill and submit the contact form	Low	Sprint-2
		USN-4	As a user, I can see the social media profiles of the university	I can reach out to them via social media	Medium	Sprint-1
		USN-5	As a user, I can see testimonials of students who graduated from the university	I can access the testimonials	Medium	Sprint-1
	Admissions	USN-6	As a user, I can see the previous year cut-off marks	I can download the previous year cut-off details	High	Sprint-2
		USN-7	As a user, I can read about proud alumni of the university	I can access the details of alumni of the university	Medium	Sprint-2
		USN-8	As a user, I can predict my eligibility for admission at the university	I can get result as either eligible/not eligible	High	Sprint-2
	Courses offered	USN-9	As a user, I can see the courses offered by the university for PG students	I can access the course details	Medium	Sprint-3
	Events	USN-10	As a user, I can check various technical events about to happen in the university	I can register for the events	Low	Sprint-3
	E-books	USN-11	As a user, I can download and read e-books relating to visa formalities	I can download the e-books	High	Sprint-3

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story/ Task	Story Points	Priority	Team Members
Sprint-1	Exploratory DataAnalysis	US1	Perform data cleaning if required and perform univariate, bivariate and multivariate analysis.	1	Low	Yamuna devi V
Sprint-1	Analysis of different regression models	US2	Compare the R2 scores of different fundamental regression models like Decision Trees, Random Forest, Multiple Linear Regression, Logistic Regression, etc and determine which model has the highest R^2 score.	2	Medium	Kavya R
Sprint-2	Web App Development and model integration using pickle file	US3	Develop the web app to predict the probability of acceptance given a test data for a candidate. Persist the model with a pickle file and integrate it with the web app.	3	High	Gokul P
Sprint-3	Deploying the model in IBM cloud.	US4	Register in IBM cloud. Use IBM Watson ML service and IBM Watson Studio to deploy the Logistic Regression Model. Test the deployed model with few examples.	3	High	Ramprakash S U
Sprint-4	Integrate the webapp with the deployed model.	US5	Use the deployed model in IBM Watson through the scoring endpoint by making an API call with the IBM cloud API key.	3	Medium	Ramprakash S U

6.2 Sprint Delivery Schedule

PROJECT TRACKER, VELOCITY & BURNDOWN CHART

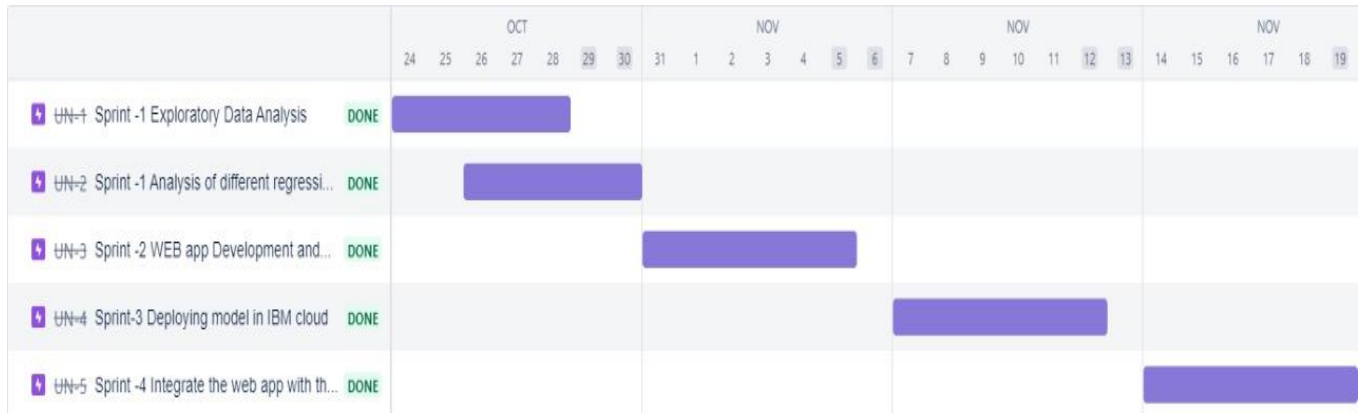

Sprint	Total Story Points	Duration	Sprint StartDate	Sprint End Date (Planned)	Story points completed (as on planned date)	Sprint release date(Actual)
Sprint-1	3	6 days	24 Oct 2022	29 Oct 2022	3	30 Oct 2022
Sprint-2	3	6 days	31 Oct 2022	05 Nov 2022	3	06 Nov 2022
Sprint-3	3	6 days	07 Nov 2022	12 Nov 2022	3	11 Nov 2022
Sprint-4	3	6 days	14 Nov 2022	19 Nov 2022	3	18 Nov 2022

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

7. CODING & SOLUTIONING

7.1 Feature 1 - FLASK APP

The following is the flask app code and working

```
from flask import Flask, render_template, redirect, url_for, request
import requests
app = Flask(__name__)
@app.route("/", methods = ['POST', 'GET'])
def index():
    if request.method == 'POST':
        arr = []
        for i in request.form:
            val = request.form[i]
            if val == "":
                return redirect(url_for("demo2"))
            arr.append(float(val))
        # deepcode ignore HardcodedNonCryptoSecret: <please specify a reason of ignoring this>
        API_KEY = "Sv7WDB3Z_qZyWbgIhUOb59SVrBjYJAU5VE4o1bta07uP"
        token_response = requests.post('https://iam.cloud.ibm.com/identity/token', data={
            "apikey": API_KEY,
            "grant_type": 'urn:ibm:params:oauth:grant-type:apikey'
        })
        mltoken = token_response.json()["access_token"]
        header = {'Content-Type': 'application/json', 'Authorization': 'Bearer ' + mltoken}
        payload_scoring = {
            "input_data": [{"field": 'GRE Score',
                            'TOEFL Score',
                            'University Rating',
                            'SOP',
                            'LOR ',
                            'CGPA',
                            'Research'],
                           "values": arr]
        }
        response_scoring = requests.post(
            'https://eu-de.ml.cloud.ibm.com/ml/v4/deployments/b1e18f27-54d8-4e57-82a6-
            acaa092e7db0/predictions?version=2022-11-16',
            json=payload_scoring,
            headers=header
        ).json()
        result = response_scoring['predictions'][0]['values']
        if result[0][1][1] > 0.5:
```

```

return redirect(url_for('chance', percent=result[0][1][1]*100))
else:
return redirect(url_for('no_chance', percent=result[0][1][1]*100))
else:
return redirect(url_for("demo2"))
@app.route("/home")
def demo2():
return render_template("demo2.html")
@app.route("/chance/<percent>")
def chance(percent):
return render_template("chance.html", content=[percent])
@app.route("/nochance/<percent>")

University Admission Eligibility Prediction System

Enter your details and get probability of your admission

Students are often worried about their chances of admission to University. The aim of this project is to help students in shortlisting universities with their profiles. The predicted output gives them a fair idea about their admission chances in a particular university. This analysis should also help students who are currently preparing or will be preparing to get a better idea.

26	25	336	119	5	4	3.5	9.8	1	0.97
27	26	340	120	5	4.5	4.5	9.6	1	0.94
28	27	322	109	5	4.5	3.5	8.8	0	0.76

8.2 User Acceptance Testing

User Acceptance Testing (UAT) is a type of testing performed by the end user or the client to verify/accept the software system before moving the software application to the production environment. UAT is done in the final phase of testing after functional, integration and system testing are done.

The User Acceptance of this product is not surveyed enough to give a solid conclusion. The theoretical and hypothetical acceptance is calculated to be high enough to conclude that this product is usable and valuable.

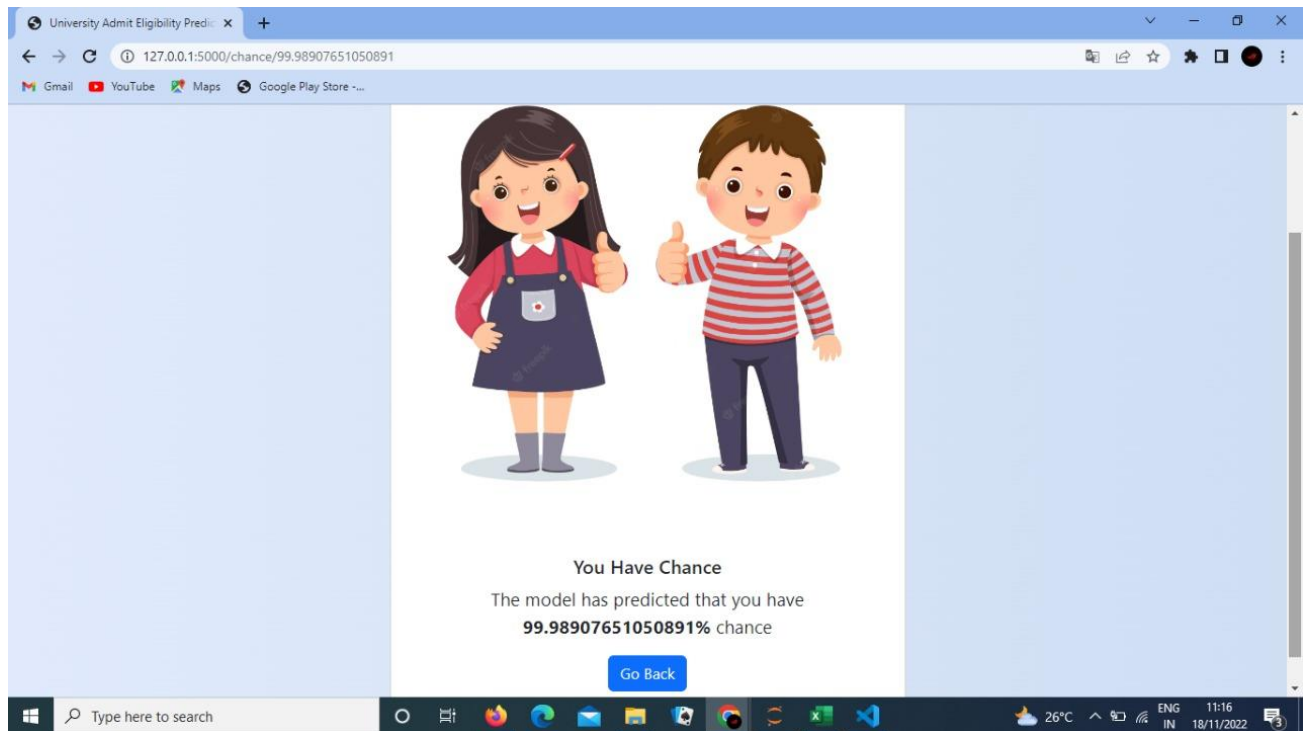

9. RESULTS

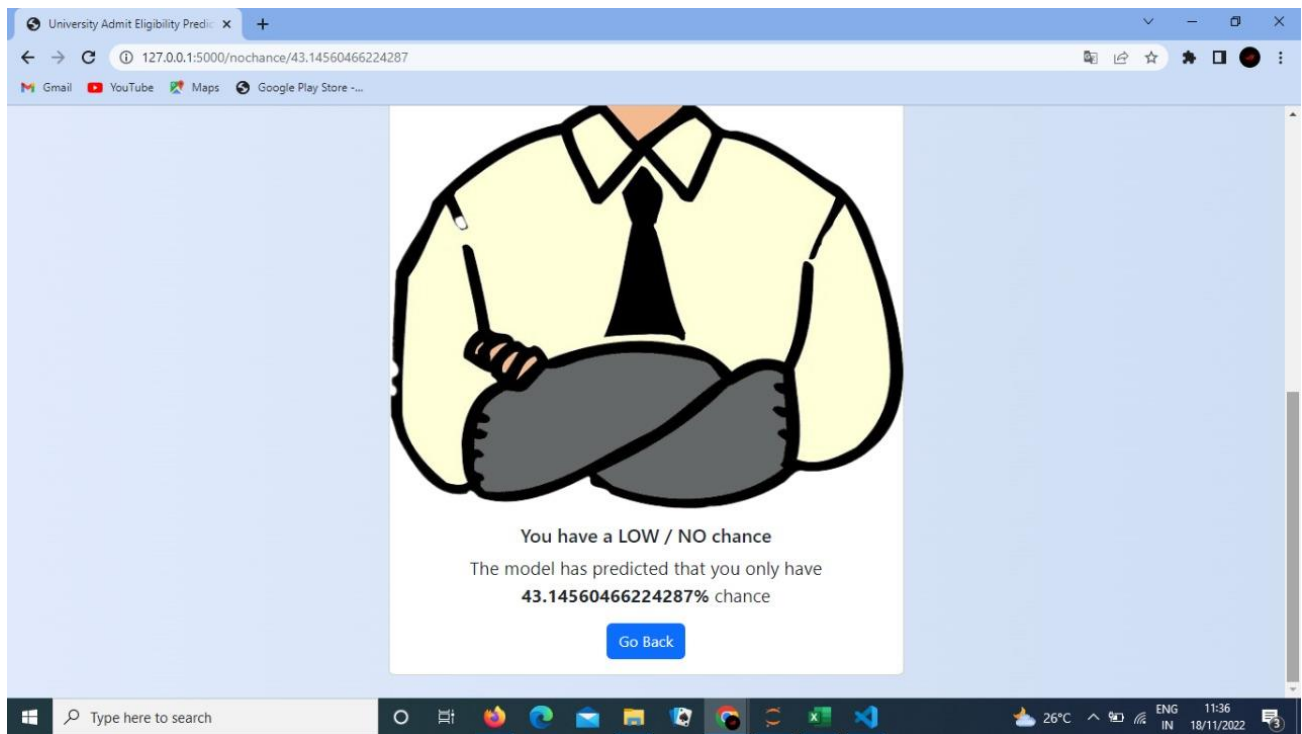

9.1 Performance Metrics

The Performance is the Accuracy of the model trained.

The training accuracy of the model is 92%.

The testing accuracy of the model is 89%.

10. ADVANTAGES & DISADVANTAGES

ADVANTAGE

1. Know the percentage
2. Lower investigation
3. Provide Relevant Material
4. Reduce time consumption
5. Good user experience

DISADVANTAGE

1. Significant investments required
2. Unable to capture changes
3. Privacy concerns

11. CONCLUSION

We have successfully developed an application using python flask, HTML, CSS. By using the application, we can predict whether we can get admission in the desired University or not.

12. FUTURE SCOPE

The future scope of this project is very broad. Few of them are:

- This can be implemented in less time for proper admission process.
- This can be accessed anytime anywhere, since it is a web application provided only an internet connection.
- The user had not need to travel a long distance for the admission and his/her time is also saved as a result of this automated system. This project is used specifically of education industry but still according to requirements of students and universities. It can be used as a module in many university websites to better knowledge of universities for interested students.

13. APPENDIX

13.1 Source code :

Source code is update in Coding & Solution Feature 1 itself
